Inspiration

W O O D

Design inspired by nature

Nature is a great source of inspiration which is intertwined with the modern design to form an amazing duo.

This approach to design has enabled us to create unique tile collections which take the best from nature. Our offer combines the warmth and elegance of wood with comfort of use and durability of porcelain tiles. A wide range of colours and exact reproduction of the graining of wood make them perfect for many, entirely different projects, both traditional and modern ones.

We are passing into your hands products that will perfectly complement your designs, in which life moves fast and intensely, but in harmony with nature at the same time.

GIORNATA

The Giornata collection of tiles is reminiscent of wooden parquets covered with sun rays. A wide range of colours and an interesting texture make the tiles an exceptional material for both modern and classic concepts.

The unique graphical style of the tiles means that the final surface looks exactly like natural wood.

Design close to nature

NOTTA

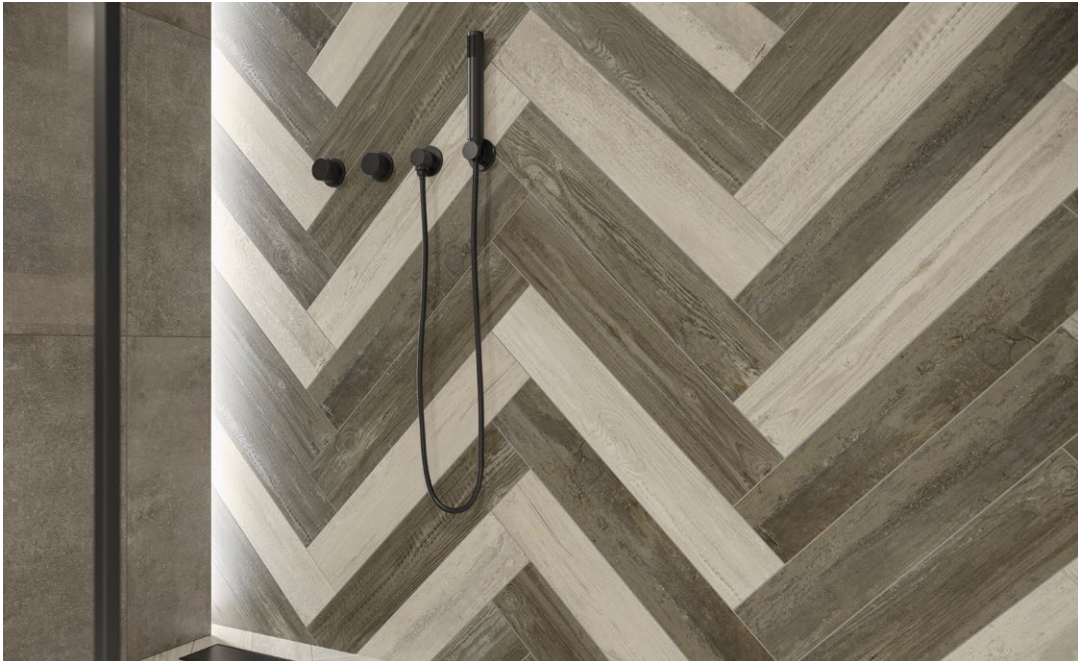

It is more and more often that we invite nature into our interiors, as we believe that is has a positive impact on our mood.
 The Notta collection offers various wood effects that suit almost every style.
 Tiles imitating light, wooden parquet, classic wooden floors and dark-tinted exotic floors are one of the most popular elements of fashionable and original designs included in the Cerrad's collections.

TRAMONTO

The Tramonto collection tiles perfectly imitate the texture of wood and look as grand and noble as the classic parquet. In order to create an interior with a timeless style, cosy and unique, customers can select various colours from the Tramonto collection. Each tile has its unique graphic design that represents wood grain and structure, hence, tiles arranged together look like natural wooden boards, adding a new quality and style to any space.

Charming in its simplicity

LIBERO

The Libero collection is the essence of elegance and simplicity. Combining the unique quality of wood with the exceptional durability and strength of porcelain stoneware has allowed us to create a collection that is perfect both for classic, warm interiors and for modern spaces. Light tones fit in well with minimalistic Scandinavian interior designs, while darker tones go exceptionally well with an industrial arrangement of the interior.

Raw elegance

NICKWOOD

Inspiration for the creation of the Nickwood collection comes from the beauty of natural wood. Tiles with a matt surface and a non-uniform structure are perfect imitation, and a modern interpretation of raw wood boards.

The special abrasion marks on the surface are also very characteristic for rough timber. They add originality and a unique effect to any interior.

Tradition and modernity

CORTONE

The Cortone collection is a proposal for those who would like to combine tradition with modernity. The tiles laid in a traditional manner would form a perfect background for elegant furniture and muted decors.

🔥 - wall tile 🪵 - floor tile ❄️ - frost resistance 🏠 - porcelain tile 📏 - rectified tile

V-SHAPE

V-shaped tiles – curved step treads are manufactured using the innovative double firing method, which makes them even more resistant to external conditions. Additionally, we have reinforced the strategic points of the tile with a special composite which fills the grooves on the back side of the tile. The V-shape series complements our range of floor tiles.

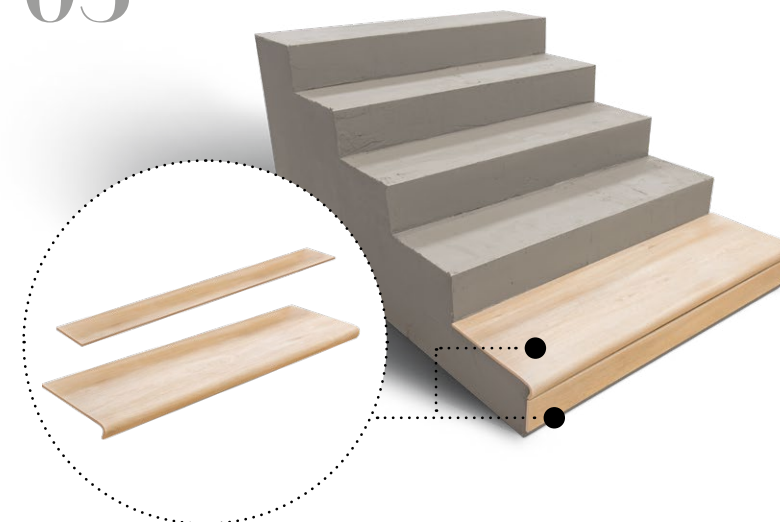

SIMPLIFIED INSTRUCTIONS

Before starting to install curved step treads, it is important to prepare the appropriate substrate, backing and insulation layers. During the installation of our products use selected and high performance materials. Flexible adhesives for frost resistant tiles, flexible sealants for expansion joints and flexible grouts should be used. This applies particularly to outdoor installation of the tiles.

Following the installation instructions and material-related guidelines guarantees many years of trouble-free use. It is possible to use our products on stairs or roofed/ open-air terraces, where surfaces are exposed to precipitation, temperature fluctuations and mechanical stress.

When installed properly, our tiles guarantee safe usage on both stairs and terraces.

03

Cut and fitted elements

Prepare the riser (cut properly from the base tile). For the step tread bend (at the edge of the step), use durable elastic material of equal thickness (2–5 mm). See Figure 4.

04

Durable elastic materials

Durable elastic materials, such as polyurethane compounds used to fill expansion joints, eliminate the potential forces and movements that result from the natural thermal expansion of various building materials.

01

Proper preparation of the substrate

Requirements – the substrate should be level, stable, dry and free of dirt. In order to improve adhesion it may be necessary to prime it (it is particularly important in case of absorbent surfaces). For outdoor applications, it is also important to insulate the substrate against moisture. We recommend solutions suggested by the construction chemicals manufacturer.

02

Bonding

Apply the adhesive to the prepared substrate. We recommend class C2 tile adhesive, with enhanced adhesion and flexibility parameters. It is also important to make at least a 2% slope towards the drainage direction, which is crucial in outdoor applications. Spread the mortar to cover the tile adhesive surface and the substrate.

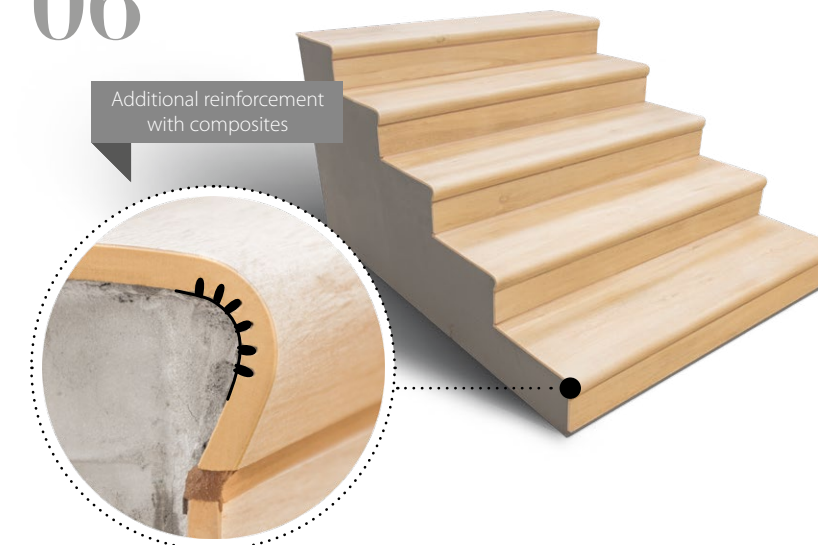

05

Installation instructions

Both the stair tread tile and the riser should be coated with the adhesive. It is also necessary to fill the bend of the stair tread nose with adhesive, before bonding. The recommended sequence is first to install the stair tread tile, followed by the riser tile.

06

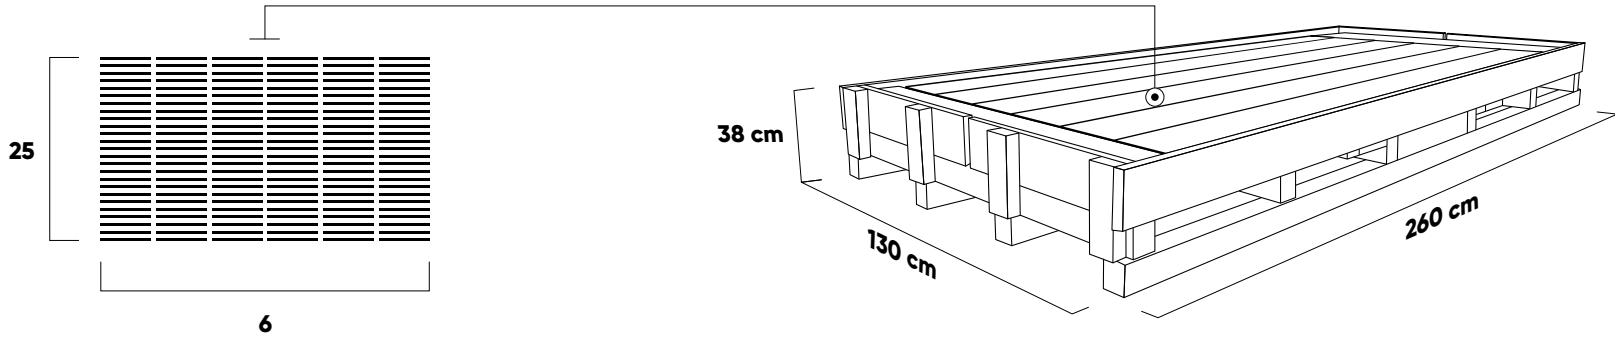

Grouting

Repeat the above steps while installing the remaining step treads. Grout the tiles once the mortar has set. The recommended flexible grout gap is min. 5 mm.
